

ABSTRACT

A speaker apparatus includes a speaker unit, a passive radiator unit,
5 and a front baffle on which the speaker unit and the passive radiator unit are
mounted to form a portion of a speaker box and a back plate. A closed front
chamber is formed by the front baffle for coupling the sound output generated
from the back of the speaker unit with the passive radiator unit. A closed
rear chamber is formed by the front baffle and the back plate for confining
10 sound output generated from the front of the speaker unit. The speaker unit
is disposed in a direction opposite to the direction of passive radiator unit, or
in a direction approximately opposite.
